

Act on Cryptographic Risk Across Endpoints

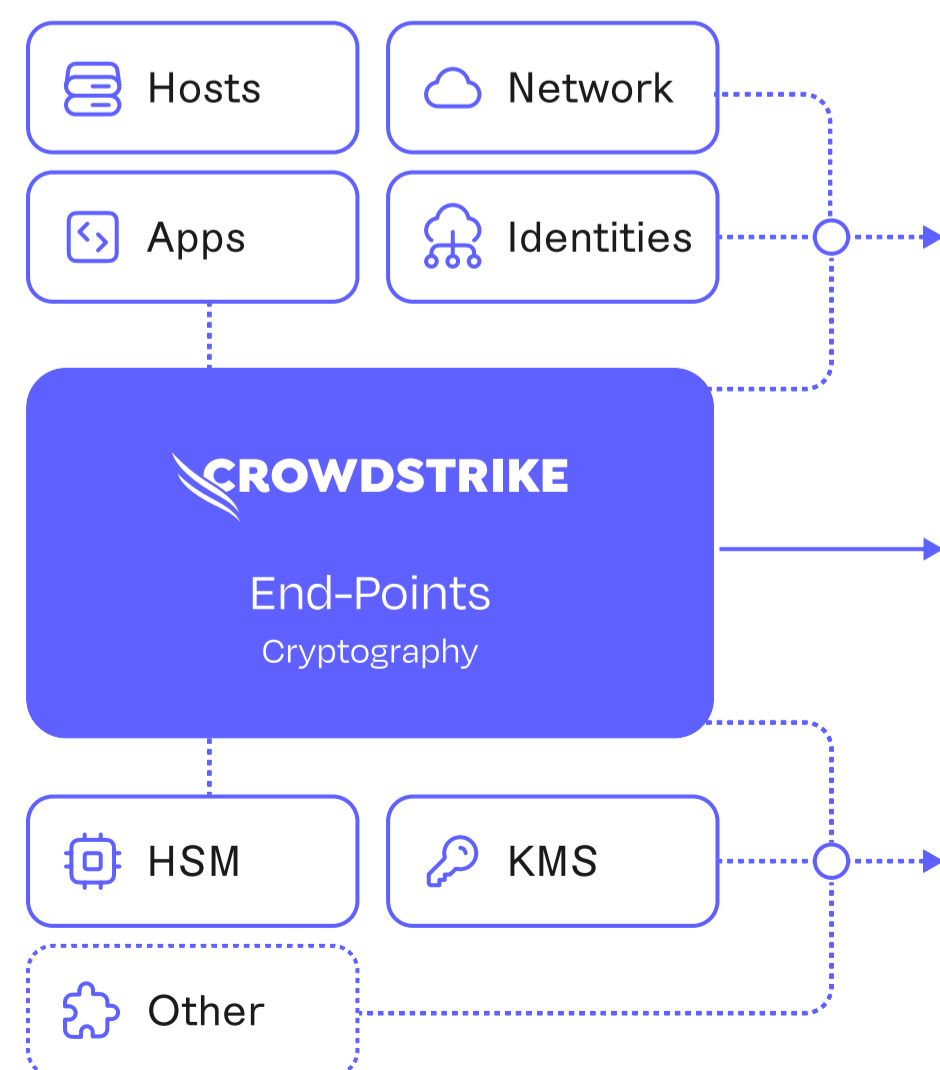

AgileSec Integration with CrowdStrike

The Integration

The AgileSec integration with CrowdStrike streamlines cryptographic posture management for endpoints running the Falcon agent. By leveraging CrowdStrike's infrastructure, this integration enables security teams to orchestrate cryptographic discovery operations at scale with minimal efforts. AgileSec brings cryptographic visibility and action to your endpoints. By using CrowdStrike telemetry, it uncovers hidden cryptographic assets, exposes real risk, and helps teams prioritize what to fix. AgileSec creates a unified system of record for cryptographic assets and dependencies across endpoints and enterprise systems, so teams can understand risk and act on what matters first.

How it works

Deploy AgileSec Integration for CrowdStrike

Deploy AgileSec directly within CrowdStrike to start uncovering cryptographic risk on endpoints.

Automate and schedule analysis of endpoints

Administrators use AgileSec Fusion SOAR templates to define cryptographic workflows, schedules, and triggers.

Discover cryptographic assets

Fusion SOAR workflows activate the Falcon Agent to execute cryptographic discovery using the AgileSec cryptographic plugin engine.

Build Centralized Cryptographic Inventory

AgileSec identifies and prioritizes cryptographic risk based on real exposure.

Vulnerability and Compliance Assessment

AgileSec analyzes cryptographic assets to identify weaknesses, vulnerabilities, and compliance gaps.

Monitor Cryptographic Evolution

Track cryptographic change and prepare for post-quantum transition.
