

KEYFACTOR COMMAND

Keyfactor™ Command

DIGITAL ADVANCED PKI AND DIGITAL CERTIFICATE MANAGEMENT

Most everything about typical PKI and certificate management is complicated: Retaining the right people with unique skillsets; cumbersome certificate deployments and updates; the expense of management and expansion; not to mention all that's at stake if something goes wrong.

To run efficiently, systems and infrastructure must be woven together – with ongoing monitoring, real-time updates, and operating within budget. When done right, this complex orchestration helps ensure that every system is covered, keeping breaches and outages at bay.

Keyfactor Command is the world's most complete and scalable cloud-based certificate management platform, providing the freedom to secure every identity across the enterprise. Get all the benefits of owning PKI without the risks. Absolutely, positively need to run it yourself? Keyfactor Command is also available for client-hosted environments.

The Freedom to Grow

Enterprise PKI is the foundation for encryption, authentication and trust. But complete PKI and certificate management can be challenged by scale, complexity and time. As certificate counts grow, manual spreadsheets and basic monitoring tools aren't enough. Security can be easily compromised due to errors, omissions, stretched resources and blind spots.

Getting this right with internal resources alone can be challenging. For IT, it requires full-time operations management of the platform and staying on top of expiring certificates. For the business, banking on a reasonable total cost of ownership is crucial for staying on budget and being prepared for tomorrow's demands around innovation and growth.

Keyfactor Command is a powerful workforce multiplier, automating real-time discovery, monitoring, issuing, and replacement of millions of certificates and keys originating inside or outside your organization while blocking untrusted access. Keyfactor Command lets you do the job with confidence, in-time and on-budget, freeing up resources to focus on other important business initiatives.

KEYFACTOR COMMAND FEATURE BENEFITS

- Managing the Complete Certificate Lifecycle – Automated lifecycle management of every certificate in your environment, including publically trusted certificates and certificates from other issuing authorities
- “Cloud First” – A robust DevSecOps tool gives you what you need to stay ahead of the curve and transform quickly, efficiently and securely
- Expertise – 24/7/365 PKI management and oversight by Keyfactor's world-class team of experts constantly ensuring operational health.

The Freedom to Get Exactly What You Need

Knowledge gaps and changing priorities can limit visibility into the certificate lifecycle. Keyfactor Command is a purpose-built PKI, constructed to meet the specific needs of your organization. From development through implementation, the platform and support team deliver high-assurance design and operational best practices that are go beyond the practical limits of many organizations who currently manage their own PKI.

Keyfactor Command's open platform structure means no re-engineering of existing applications. No other solution on the market can make that claim. We have spent years understanding device identity workflows and requirements to ensure our platform is ready to integrate and extend within your existing application suite.

The Freedom to Secure Everything

As more devices come onto your network and more apps are rolled out, the need for your PKI to scale, enforce encryption, authenticate and manage overall security grows every day. Don't hold back – cover every identity in your enterprise without worrying about breaking the budget. Our inclusive pricing frees you up to maintain best practices for every element that comes in contact with your organization – exactly the way it should be.

KEYFACTOR COMMAND FEATURE BENEFITS

- Control – Maintain complete control over the use of your Root CA keys and PKI recovery materials
- Response Commitments – Proven SLA's with clearly stated, guaranteed response times
- Governance and Compliance – Comprehensive and thorough insight into the operations of digital certificates.

KEYFACTOR COMMAND FEATURE BENEFITS

- Dedicated PKI Environment – A customer-devoted root CA, with no shared infrastructure
- Comprehensive Site License – Unlimited usage, no counting, no up-charges
- Assurance – High availability is built into a SOC 2 Type 2 documented environment.
